

Accurate River Forecasting

1 Ideas: conceptualization

- Obavezno:

Rolling-origin evaluation – Train: 1961–1990 → Test: 1991 ... Pomjeraš prozor

- Uzeti jedan sliv (npr. Doboј); Napraviti clean dataframe + lag features;
Postaviti rolling validation; Uporediti: Naive, Linear, XGBoost

TODO: Pretvori sve fajlove u long-format. Spoji ih u jedan master dataframe.

Ja ti onda:

napišem lag-feature generator

postavim rolling validation

ubacim NSE/KGE

uporedim Naive vs Ridge vs XGBoost

This is one minus A-B

These are two minuses A–B

These are three minuses A—B
